CSE 406
Security Online – Firewall

Suppose you are the attacker (10.9.0.1) in the network below. You want to hide your identity from other users. You decided if you get at least one **PING** message and at least one **TCP SYN** packet in any order, you will drop all the packets from that IP.

You must use *netfilter* to implement this. You can't use *iptables*.

Here, is a diagram of the network given for your reference.
